(57) **ABSTRACT**

Packaging is provided that supports rings for display, allows rings to be sampled on a finger of a customer and which are secured to the ring to deter theft. The packaging has a top plate with an opening therein. The opening allows a portion of the ring to pass therethrough. A security stay passes through the ring and is coupled to the top plate with the security stay spanning the opening. A bottom plate is preferably also provided with a complementary form to that of the top plate. The security stay is trapped between the bottom plate and top plate to hold the security stay in place. Saddles are also preferably provided for lateral support of the ring and to allow the packaging to display the ring in an upright fashion while the packaging is resting upon a surface.
